

UI GUIDE

How will you style the fortune reveal?

I am planning on styling the fortune reveal at the end of the 4th layer, user can choose behind a card and find the fortune appear.

What CSS transitions will be used for your color or number choice?

Since I am not completely comfortable with Javascript, I am going to do the blinking color, but I am going to try to have the actual color blink on the card.

The number choices will blink the amount of numbers it is then move to the next layer.

What CSS transitions will be used when your fortune is revealed?

Just the blinking transitions. I may have the cards move slightly when hovered and then have the fortune display under the last cards.
